

P8X Instruction Set -- Quick Reference (rev D)

Opcodes, mnemonics and cycle counts generated live from genucode.py (the microcode source of truth) -- cannot drift from the hardware.

Operands: #imm immediate | addr 16-bit absolute | (Pn) ptr indirect | (Pn)+ post-increment | (no operand) implied. **By**=bytes, **Cy**=cycles (incl. fetch). **Flags (FI):** C carry (active-high: ADD carry-out / SUB,CMP no-borrow A>=B), Z zero, N negative (bit7), V overflow. '=' = none.

Signed branches test N^V / Z. **Memory (rev E):** \$0000-1FFF ROM | \$2000-FEFF RAM | \$FF00-FFFF I/O. P0=PC, P3=stack (empty-descending). JZ/JNZ/JC are aliases of BZ/BNZ/BCP.
